PROFESSIONAL SUMMARY

Senior Cloud Engineer and AWS Certified Solutions Architect with hands-on experience designing, provisioning and running secure production infrastructure on AWS, with practical work across Azure and Alibaba Cloud. I build the automation that sits on top of the infrastructure too: Terraform pipelines, Kubernetes clusters, disaster recovery, and AI workflows that handle real business processes end to end. Proven record in cutting cloud cost, holding high uptime with self-healing alarms, and delivering scalable systems for multinational teams.

TECHNICAL SKILLS

Cloud Platforms	AWS (EC2, RDS, S3, VPC, Lambda, ELB, Auto Scaling, Aurora Serverless, CloudFront, CloudWatch, CloudTrail, Secrets Manager, DRS, Lightsail), Azure (App Gateway, WAF, ARM Templates, DevOps), GCP, Alibaba Cloud (ECS, OSS)
AI & Automation	n8n, LangChain, OpenAI API, Qwen LLMs, RAG pipelines, Milvus, AI agents, Prompt engineering, LLM dataset curation, NLP, Exploratory data analysis
DevOps & IaC	Terraform, Ansible, Jenkins, GitHub Actions, CI/CD, Git, Docker, Docker Compose, Kubernetes, Helm
Networking & Security	VPC design, OpenVPN, Security groups, NACLs, Route 53, SSL/TLS, WAF, GuardDuty, EventBridge, IAM, Zero trust
Observability	CloudWatch, CloudTrail, Prometheus, Grafana, ELK Stack
Data & Storage	MySQL, PostgreSQL, Aurora, Milvus, S3, EBS, EFS, AWS DMS
Languages & Systems	Python, Bash, JavaScript, HCL, PowerShell, YAML, JSON, RHEL, Ubuntu, CentOS

PROFESSIONAL EXPERIENCE

Senior Cloud Engineer

March 2024 – Present

Puffersoft (Pvt) Ltd · Faisalabad, Pakistan

- Designed and deployed a secure three tier AWS architecture with public and private subnets across multiple availability zones, Application Load Balancers, NAT gateways and layered security groups and NACLs, serving around 150,000 user requests a day.
- Built a scalable file upload and download system on S3 with multipart uploads and pre signed URLs behind CloudFront, handling files up to 5 GB and about 2,000 uploads a day.
- Cut monthly AWS compute cost by 22% with reserved and spot instances and dynamic auto scaling across EC2 and RDS.
- Built the monitoring layer in CloudWatch and CloudTrail with dynamic alarms that fix problems on their own: an instance nearing its IOPS or throughput limit triggers a Lambda that raises both before the workload degrades, and emails the team through SNS, a large part of how the 99.9% uptime SLA held.
- Automated detection and blocking of suspicious traffic with AWS WAF and GuardDuty, with EventBridge and Lambda for remediation, cutting incident response from 45 minutes to near real time.
- Converted all monitoring, networking and compute configuration to Terraform so any environment can be rebuilt the same way every time, and moved every hardcoded credential into AWS Secrets Manager to meet SOC 2 and ISO 27001 requirements.
- Deployed a production Kubernetes cluster on AWS EKS with the Load Balancer Controller, autoscaling and high availability for containerized services.
- Set up backup and disaster recovery with AWS DRS, reaching a 15 minute RPO and 1 hour RTO on critical systems.
- Led the migration of a 400 GB production MySQL database to AWS RDS with AWS DMS, zero data loss and minimal downtime.
- Built CI/CD pipelines in GitHub Actions that run tests and linting, build Docker images and block any deploy that fails a test.
- Designed OpenVPN infrastructure with MFA for encrypted remote access for 50+ team members.
- Deployed Alibaba Cloud ECS instances with Docker Compose to host self hosted tools including n8n, PostgreSQL, pgvector, OpenWebUI and NocoDB, and added Azure Application Gateway with WAF against OWASP Top 10 threats.
- Shipped client facing n8n automation: CV shortlisting, multi tier document approval, an employee request portal, social content publishing, invoice conversion and a RAG support chatbot.
- Mentored 3 junior cloud engineers on AWS practice, Terraform and troubleshooting.

Data Scientist (Part time, Remote)

June 2024 – January 2026

A.R Data Science · Faisalabad, Pakistan

- Built and cleaned high quality datasets for large language models, used for training, testing and improving model performance.
- Designed agentic tasks that helped models reason better and make more accurate decisions.
- Reviewed and validated AI generated outputs to keep data quality high and aligned with each project goal.
- Used machine learning, statistics and NLP for data analysis, feature engineering and dataset tuning, with exploratory data analysis to find patterns, trends and gaps.
- Built automated data pipelines to speed up data processing, and helped put data driven parts into production AI systems.
- Worked as a lead and reviewer, guiding junior data scientists and supervising task pipelines, and wrote clear reports and documentation for local and international teams.

KEY PROJECTS

DocSign — **n8n · Qwen · Milvus · PostgreSQL**
Full document lifecycle: an LLM checks each submission against company policy, then it routes through HR, Finance and Exec sign off with webhook driven decision handlers. Arabic policy checking runs on Qwen with Milvus retrieval.

RAG Support Chatbot — **n8n · Qwen · Milvus · Chatwoot · PostgreSQL**
A support agent inside Chatwoot live chat that answers from the company knowledge base through Milvus backed retrieval, with Postgres chat memory and human handoff tools.

AI Content Factory — **n8n · OpenAI · Facebook · LinkedIn**
One chat trigger produces ads, social posts, landing page copy and email campaigns with generated images. Nothing publishes without a human: drafts are emailed for review before going live.

CV Shortlisting Workflow — **n8n · Qwen · Google Sheets**
Applications arrive by webhook or form, text is pulled from the PDF, and a Qwen agent scores each candidate against configurable job criteria, then routes, logs and emails automatically.

Invoice to Spreadsheet — **n8n · Qwen · JavaScript**
PDF invoices arrive through a form, an LLM extracts the structured fields and the workflow returns a formatted XLSX file straight to the inbox.

Self Healing Storage Alarms — **CloudWatch · Lambda · EBS · SNS · Terraform**
Dynamic CloudWatch alarms watch IOPS and throughput on every instance. When a volume nears its limit the alarm fires a Lambda that raises IOPS and throughput on the spot, then emails engineers through SNS, closing the gap between detection and fix.

Production EKS Cluster — **EKS · Load Balancer Controller · Lambda · CloudWatch**
Multi availability zone cluster with the AWS Load Balancer Controller, horizontal pod autoscaling, cluster autoscaler and Container Insights, with Lambda based automated remediation.

400 GB Database Migration — **AWS DMS · MySQL · RDS**
End to end migration of a 400 GB MySQL database using AWS DMS with continuous replication, so the cutover window stayed short and nothing was lost.

EDUCATION

BSc Computer Science — University of Engineering and Technology, Lahore · May 2024

CERTIFICATIONS

AWS Certified Solutions Architect, Associate · AWS Certified Cloud Practitioner · AWS DevOps: Continuous Integration & Deployment · Terraform · Ansible Automation · Kubernetes Basics & Helm · Docker Fundamentals · Linux · n8n Workflow Automation, KodeKloud
